

# IPM+ Asset Lifecycle Management (ALM)

## Optimizing IT & Non-IT Infrastructure

### 1. Asset Tracking & Discovery

*IPM+ offers comprehensive visibility through intelligent tracking and discovery features:*

- Automated and manual asset discovery and registration of IT & Non-IT Assets.
- Asset tagging, categorization, and integration with barcode/QR code scanners.
- Remote tracking of asset location and status.

### 2. Asset Lifecycle Stages

*Full control over the journey of every asset from procurement to retirement:*

- Management of procurement, stock, allocation, and assignment.
- Maintenance logs, warranty tracking, and secure disposal.
- Asset transfer and relocation tracking.

### 3. Asset Verification & Audit Management

*Automating the audit process for maximum accuracy and compliance:*

- Self-verification campaigns and automated audit reports.
- Hardware change detection and complete asset history tracking.

### 4. Notifications & Workflow Automation

*Streamlining operations through intelligent alerts and workflows:*

- Automated workflows for asset requests and approvals.
- Inactive asset alerts and role-based access control.

### 5. Reporting & Analytics

*Data-driven insights for optimized asset utilization:*

- Real-time dashboards and customizable reports.

- Historical logs and data export capabilities.

## **6. Enhanced Security & Compliance**

IPM+ ensures enterprise-grade security through Two-factor authentication, AD integration, and role-based access control.

## **7. Platform Support**

Full support and optimization for Windows, Linux, and Mac operating systems.

These features collectively enhance asset tracking, lifecycle management, verification, automation, and reporting, leading to optimized asset utilization and management.
