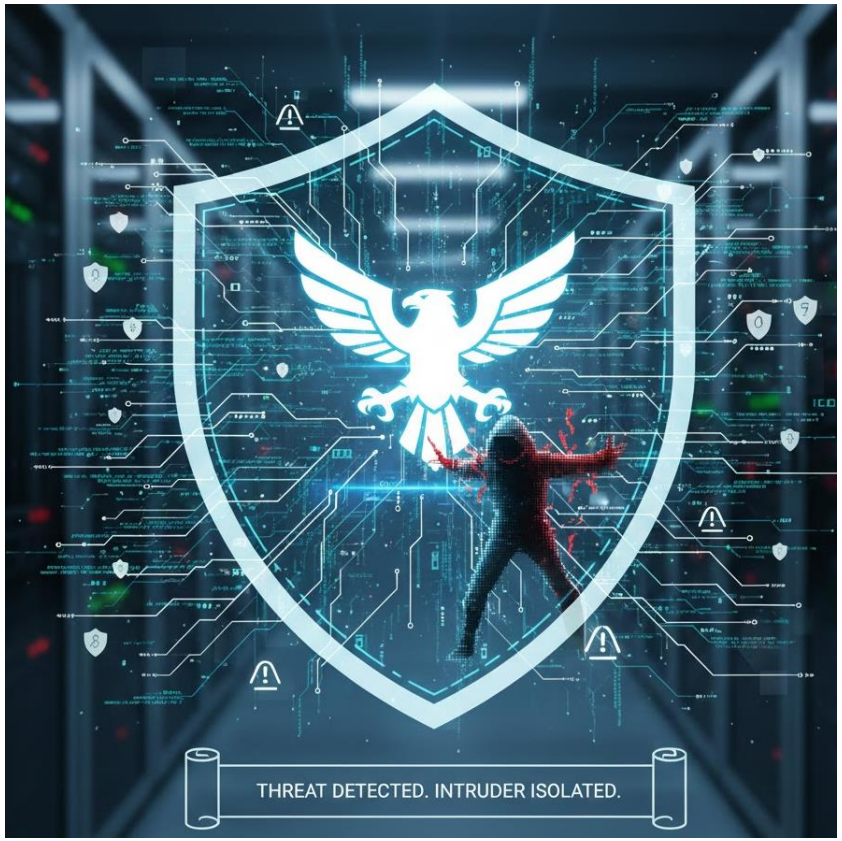
Strategic Analysis & Proactive Defense

3/2026

When Precision and Time Matter - NeoCISO

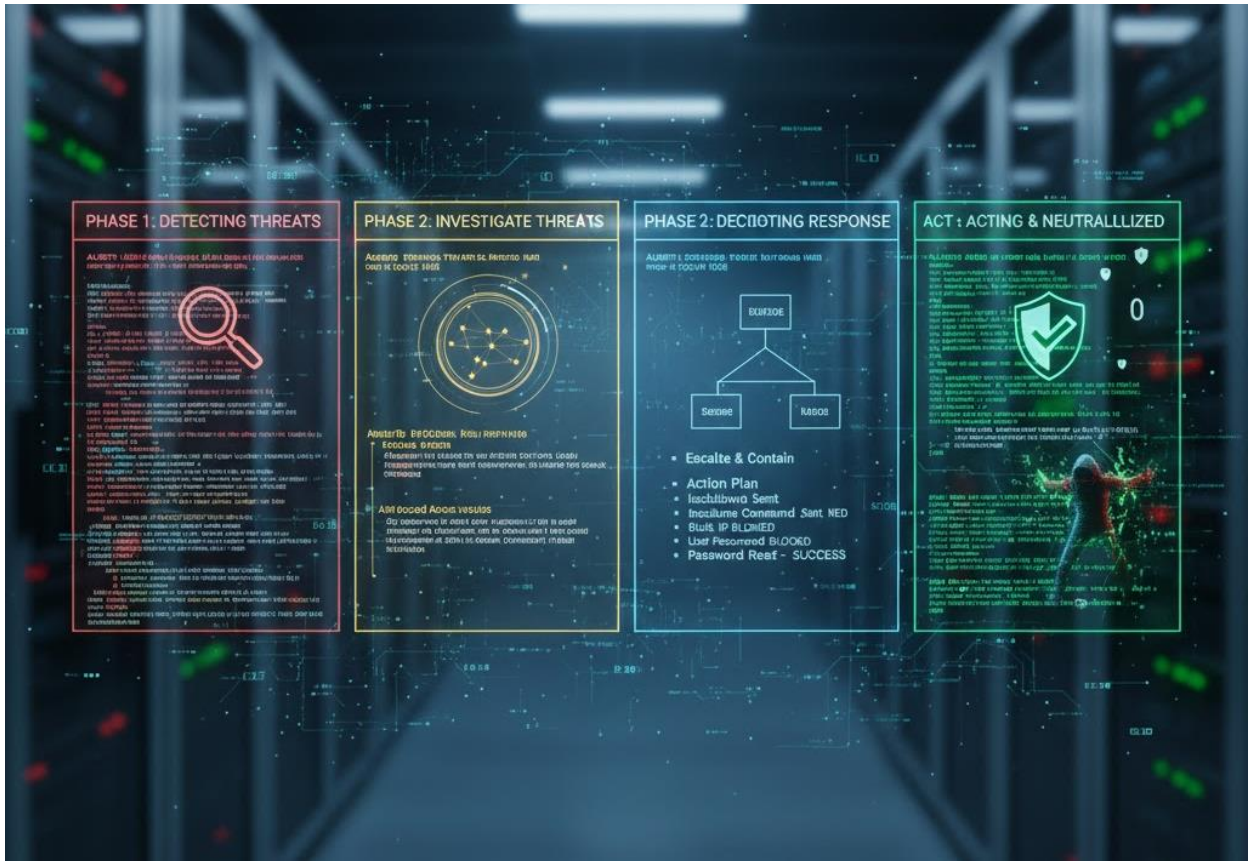
NeoCISO is a Cyber solution designed for the AI era. It performs a holistic context-based analysis on your cybersecurity environment 24/7 and is able to detect and act immediately.

While most systems perform generic analysis and the focus is on closing alerts, NeoCISO conducts a deep analysis based on the organization's environment, providing visibility and high precision in the decisions and actions, keeping your organization safe.



The Need – Act Now!

- ✓ Organizations are facing overwhelming cybersecurity challenges in the AI era.
- ✓ Layers of defense using multiple systems and complexity to prevent penetration.
- ✓ Each solution is different and uses different cybersecurity tools and means.
- ✓ Very high demand for protection and 24/7 expertise on hand to monitor, detect, investigate, decide, and act, in a personalized context-based analysis.



The Solution - NeoCISO

Preventive Protection

- *In-depth automated analysis of your Information infrastructure*
- *Potential “holes” identification*
- *Correction actions recommendation.*

Real Time Incident Management – Act Now!

Latency creates exposure; immediacy creates security

The loop of Investigation, Decision & Action is done by the same tool.

NeoCISO

The key to protection is taking the right action at the right time.

Your response time is shortened.

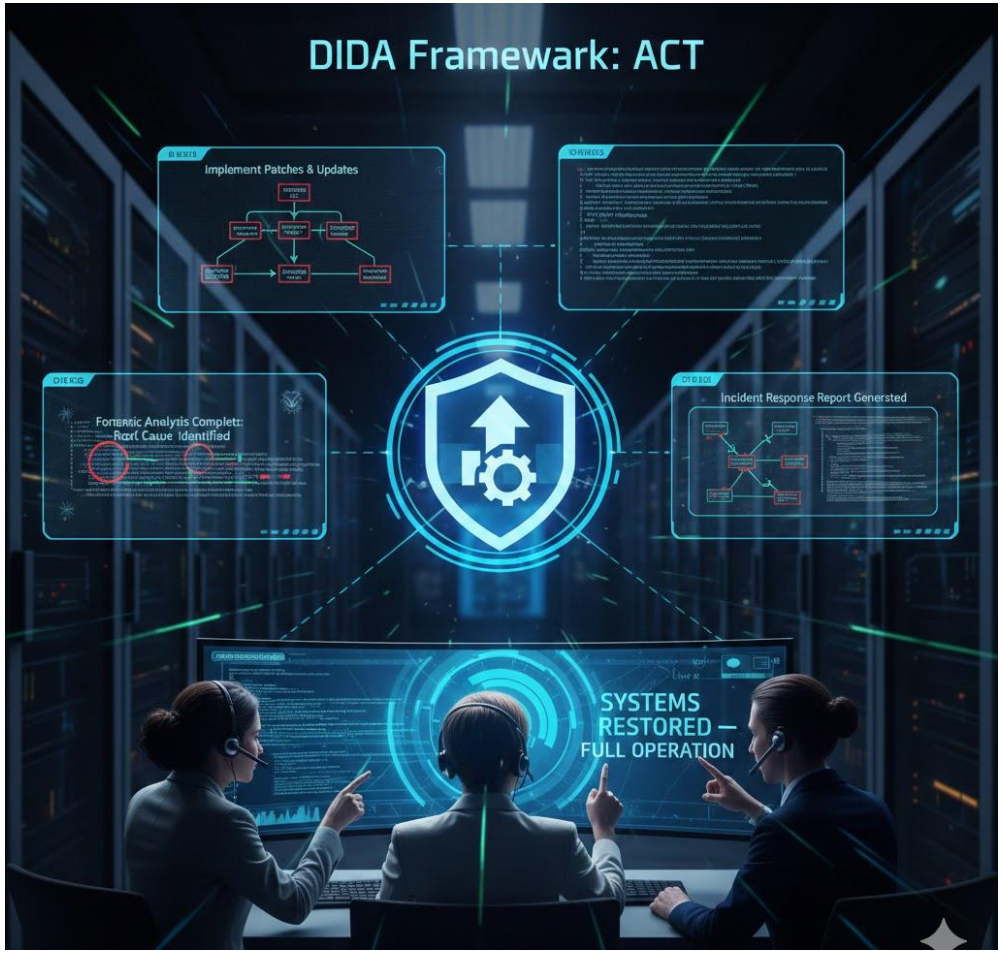
AI-Powered Detection, Automated Response

- *Proactive monitoring & behavioral analytics*
- *Identify anomalies instantly, while leveraging global threat intelligence.*
- *Once a threat is detected, automated analysis & AI driven insights accelerate mitigation through workflows.*
- *Integrated forensic analysis for post-incident investigations*



Automated Reports Generator

Executive-ready incident and investigation reporting, including timelines, root-cause analysis, and documented remediation outcomes mapped to leading security frameworks (e.g., NIST, ISO 27001).

NeoCISO vs other solutions

Feature	Traditional Cyber AI platform	NeoCISO AI Platform
Primary Focus	Automate predefined workflows	Automate predefined workflows
Logic model	Rules, playbooks, scripts	Reasoning-first analysis over evidence
Context	Manual enrichment / limited correlation	Context-first: asset ownership, exposure, reachability, business impact
Auditability	Activity logs	Decision rationale + evidence trail (“why” + supporting signals).
Verification	Often manual or partial	Verifies outcome and retains proof of correction
Outcome	Traditional: “Actions/tickets generated”	Defensible determinations (risk accepted/mitigated) + proof

Thank you
